10 THE HONORABLE JOHN C. COUGHENOUR
11

12 UNITED STATES DISTRICT COURT
13 WESTERN DISTRICT OF WASHINGTON AT SEATTLE
14

15 ZANGO, INC.,

16 NO. 07-CV-00797 JCC

17 Plaintiff,

18 v.
19 ZANGO'S REPLY IN SUPPORT OF
20 MOTION FOR TEMPORARY
RESTRANDING ORDER
21 PC TOOLS PTY, LTD.,
22
23 Defendant.
24

25
26 I. INTRODUCTION
27

28 We have concluded Seekmo is not malicious. We have removed the block to
29 your URL
30

31 E-mail from Jim Meem, Manager of Malware Research Center at PC Tools, to Zango, March 28,
32 2007 at 11:48 p.m. (emphasis supplied).¹
33

34 In its opposition, PC Tools attempts to divert attention from the harm it is causing Zango
35 by "fighting the last war"—the completely remedied, and hence irrelevant, pre-2006 business
36 practices of the former 180 Solutions. In fact, beginning January 1, 2006, Zango revamped its
37
38
39
40
41

42
43 ¹ Declaration of John Sarapuk in support of Defendant's Opposition to Motion for Temporary Restraining Order, at
44 p. 49 of [and?] 114. Mr. Sarapuk states at paragraph 19 of his declaration that the Meem statement has been (or will
45 be) read out of context. We do not believe this is accurate and encourage the Court to review the entirety of the e-
mail string including, without limitation, the subsequent e-mails involving Mr. Meem through p. 55 of the
Declaration.

ZANGO'S REPLY IN SUPPORT OF MOTION FOR
TEMPORARY RESTRAINING ORDER - 1
No. 07-CV-00797

GORDON TILDEN THOMAS & CORDELL LLP
1001 Fourth Avenue, Suite 4000
Seattle, WA 98154
Phone (206) 467-6477
Fax (206) 467-6292

software and practices. Currently, in the words of Richard Purcell, a member of the Data Privacy and Integrity Committee to the Department of Homeland Security, “Zango products are not infections, viruses, malware or spyware.” Although Mr. Purcell is one of the world’s leading authorities on privacy and malware, this Court need not rely solely on his opinion. As recently as two weeks ago, representatives of the Federal Trade Commission (FTC) visited Zango’s offices in Bellevue for general meetings on the company’s software and practices and made absolutely no mention of any problems with either—or with anything else.

In its opening papers, Zango established the dramatic damage to its revenues and goodwill by PC Tools' ongoing actions. That harm is not disputed, and the "balance of harm" continues to tip dramatically in Zango's favor as the harm PC Tools claims it will suffer if the TRO issues is evanescent. PC Tools alleges, with no evidentiary support, it will lose its customers' confidence if PC Tools no longer identifies Zango as an infection. Those customers would surely deem it reasonable for PC Tools to rely on the investigation and conclusions by the relevant enforcement agency, the FTC.

II. FACTS

A. Zango is not “Malicious”.

1. The FTC Order and Oversight Ensure Zango is not “Malware.”

The Declaration of Kevin Osborn, Zango's Associate General Counsel and manager of its day-to-day compliance efforts, establishes that Zango's services and software are regularly reviewed by the FTC and are in compliance with all components of the FTC Order. Indeed, Zango's continued existence depends on transparency and compliance—being "purer than Caesar's wife." The key elements of the FTC Order include:

- 1 • Post-January 1, 2006 Installation Not at Issue. Zango demonstrated to the FTC
 2 that installations of its software occurring on computers on or after January 1,
 3 2006 presented no issues relative to the substantive areas addressed by the FTC in
 4 the consent agreement – namely, that consumers must give express consent for
 5 the installation of the software following clear and conspicuous notice; that ads
 6 served by the software are labeled as such; that channels are provided to enable
 7 customer feedback and complaints (and that adequate responses to those
 8 communications are timely made), and that customers have access to simple and
 9 standard uninstallation tools to remove the software from their computers if they
 10 so desire.
- 11 • Continuing FTC Authority. The FTC consent agreement requires Zango to
 12 demonstrate that it is in compliance with the agreement. Mr. Purcell's written
 13 report, attached to his previously filed declaration, complied with this
 14 requirement. Furthermore, Zango hosted two Washington, D.C.-based FTC
 15 lawyers at its offices in Bellevue on May 10, 2007, for a day of meetings and
 16 discussions about the company, its business model, current software distribution
 17 practices, and related subjects. One of those lawyers had been closely involved in
 18 the CID process. FTC representatives gave no indication during (or after) these
 19 meetings that the FTC thought Zango to be out of compliance with the consent
 20 agreement.
- 21 • Future Potential Penalties. The potential substantial monetary penalties for a
 22 violation of the consent agreement could result in Zango being unable to continue
 23 its business operations, meaning the end of a company started in 1999 and
 24 presently employing approximately 230 employees in six offices spread over four
 25 countries. The company and its employees understand that remaining in
 26 compliance is not a goal, but a mandate.

30 Osborn decl. ¶6.

31 2. **PC Tools' Own Endorsement.**

32 Tellingly, the strongest endorsement of Zango's position comes from PC Tools itself.
 33 Leaving aside, for the moment, the Jim Meem statement at the commencement of this brief, and
 34 accepting at face value the laudatory things PC Tools has said about itself and the thoroughness
 35 of its efforts appearing at paragraphs 4 through 7 of the Sarapuk Declaration, PC Tools admits
 36 the following:

1 8. After comprehensive analysis, the MRC [Malware Research Centre] team
 2 assigns a level of risk using the following terms: Info & PUAs (Potentially
 3 Unwanted Applications) presenting no known risks

4

5 **Current Classification of Zango Software**

6

7 22. On or before May 14, 2007, before Zango filed its lawsuit, PC Tools made
 8 the independent decision to reclassify three of Zango's software programs
 9 (Seekmo Search Assistant, Zango's Search Assistant, and Hotbar) as PUAs
 10 (potentially unwanted applications). As a separate and independent matter, PC
 11 Tools also decided to modify Spyware Doctor to allow for PUAs to avoid being
 12 detected and removed by Spyware Doctor's auto-scan function (On Guard)
 13

14

15 23. As a result, the three Zango programs that Zango has put at issue
 16 are no longer automatically detected and removed by Spyware Doctor's
 17 On Guard auto-scan function because they are classified as PUA.

18

19 Sarapuk Declaration at ¶¶ 8, 22 and 23 (emphasis supplied). All Zango seeks by this TRO is an
 20 Order compelling PC Tools to implement this decision in those areas where it has not yet been
 21 implemented.

22

23 **3. Mr. Edelman is a Long-Time Foe Without Credibility.**

24

25 The hyperbolic and inaccurate accusations of Mr. Edelman are contradicted and rendered
 26 not credible by PC Tools itself—the statement by the head of PC Tools' Malware Research
 27 Center that Zango is “not malicious.” Moreover, the latest version of Spyware Doctor Starter
 28 Edition—not coincidentally made available *two days ago*—no longer automatically removes
 29 Zango (while continuing to label it an “infection”). PC Tools would not do this if, as Mr.
 30 Edelman contends, Zango is malicious spyware. The FTC itself and PC Tools' unguarded
 31 admissions are more credible than the assertions of Mr. Edelman, a long-time foe of Zango and
 32 its predecessors.

33

34 As noted in the Declaration of Kevin Osborne, Mr. Edelman's bias is perhaps partially
 35 explained by a case with an embarrassing outcome for Mr. Edelman.

1 That matter, *Simios v. 180solutions, Inc.*, Case No. 05 C 5235 (N.D. Ill., filed
 2 Sept. 13, 2005), was dismissed – with prejudice – when it became clear that the
 3 primary putative class representative *had never had Zango/180solutions software*
 4 *installed on his computer*. One might have expected the putative plaintiffs' expert
 5 to have inspected the computer on which claims of nonconsensual installation of
 6 Zango/180solutions software were based, but in this instance it appears that
 7 inspection by Mr. Edelman either never occurred or he was unable to actually
 8 make the requisite identification.
 9

10 Osborn decl. ¶ 12.

11
 12 Substantively, Mr. Edelman mischaracterizes Zango in nearly all respects, as described in
 13 the Second Declaration of Gregg Berretta ¶¶7-38, filed herewith. Significantly, many of these
 14 criticisms were made by Mr. Edelman in comments opposing the terms of the FTC consent
 15 agreement. The FTC rejected those concerns, both in a written response to Mr. Edelman and in
 16 determining that no change to the negotiated settlement terms was necessary following
 17 consideration of Mr. Edelman's comments—comments duplicated here months after the fact.
 18
 19 Osborn decl. ¶ 8; Second Berretta decl. ¶18.

20
 21
 22
 23
 24 **B. Zango Continues to Suffer Harm.**

25
 26 PC Tools suggests that Zango is no longer suffering irreparable harm due to the release
 27 two days ago of Spyware Doctor 5.0.0.185 (“version 185”). This is not true for multiple reasons
 28 set forth in the Second Berretta Declaration, ¶¶ 2-5.
 29
 30
 31

32
 33
 34 a. Prior versions still disable Zango: Many of the 100 million downloads of
 35 Spyware Doctor contain version 5.0.0.169, the version in wide distribution
 36 when the complaint was filed and which is still available across the internet,
 37 even if not from Google. Because version 169 does not contain an auto-
 38 update feature, the millions of users that installed 169 are effectively shut off
 39 from Zango as customers without even knowing it. To this day, version 169
 40
 41
 42
 43
 44
 45

1 automatically disables Zango and the only cure for this is the relief sought by
 2 Zango.

3

4 b. Harm from “Cyberhawk.” On May 30, PC Tools announced the acquisition
 5 of Novatix, a Colorado company marketing software called Cyberhawk.
 6 Testing of the Cyberhawk software showed that Zango software was damaged
 7 in nearly identical ways to Spyware Doctor version 169.

8

9 c. Even version 185 harms Zango: Zango’s testing that current version 185
 10 prevents Zango customers from upgrading to a paid “Premium Version” of
 11 Zango. This causes Zango lost revenue and increased support costs.

12

13 d. Ongoing Damage to Reputation/Loss of Goodwill: All PC Tools software
 14 continues to label Zango and our software titles as “infections” thereby
 15 causing unnecessary fear on the part of Zango customers. The modification of
 16 labels, while appreciated, does not go far enough to eliminate concerns that
 17 customers will have regarding Zango products. Clearly, when someone pays
 18 for the Premium version of Zango software, the software is not “Potentially
 19 Unwanted.” Given Zango’s plain language disclosures, ad labeling, and
 20 multiple notifications that its software is present on the user’s machine, it is
 21 extremely unlikely that anyone currently using our software doesn’t “want it.”

22

23

24

25

26

27

28

29

30

31

32

33 III. ARGUMENT

34 A. **The TRO Does Not Involve an Unconstitutional Prior Restraint of Speech.**

35 1. **This Motion Presents No First Amendment Issue.**

36 PC Tools’ actions raise no First Amendment issue. The subject matter of the TRO is PC
 37 Tools’ computer program that enters the computer of another and physically removes Zango
 38 software. This is conduct, not speech. In this respect, the case has nothing in common with
 39

40

41

42

43

44

45

1 New.net, Inc. v. Lavasoft, 356 F. Supp. 2d 1071 (C.D. Cal. 2003). Our opponent correctly
 2
 3 analyzes the Lavasoft holding:
 4

5 Based on these conclusions, the Court held that Lavasoft's classification of
 6 new.net's software, and Lavasoft's communication of that classification to
 7 computer users, was speech-protected by the First Amendment.
 8

9 See Defendant's Opp. at 13 (emphasis supplied). We have no quarrel with this characterization
 10 of the holding, or with the holding itself. Lavasoft, however, involved a computer program far
 11 more modest than that at issue here. Quoting the District Court Judge:
 12
 13

14 New.net complains that Lavasoft has: (1) unfairly targeted and has mislabeled
 15 new.net's software; (2) inaccurately associated new.net's software with "the worst
 16 of the worst" internet downloaders; and (3) recommended to computer users that
 17 new.net's program be uninstalled.
 18

19 356 F. Supp. 2d 1071 at 1073 (emphasis supplied). Leaving aside the accuracy of Lavasoft's
 20 statements—the subject matter of the lawsuit—there is no dispute that this conduct is all speech.
 21
 22 Zango has not sought a TRO because we have been inaccurately "targeted," "mislabeled,"
 23
 24 "associated . . . with," or "recommended [for deletion]." While any of these actions may, in fact,
 25 form the basis for a tort², they are not the primary basis on which this TRO has been sought.
 26
 27 Instead, we seek relief from software distributed by PC Tools that enters the computers of third
 28 persons with whom we have an established relationship and—without notice to them—that is,
 29
 30 without any speech at all—disables or removes Zango's software.
 31
 32

33 The distinction between speech and conduct is as old as the First Amendment itself. The
 34 Supreme Court most recently visited this issue in Rumsfeld v. Forum for Academic and
 35
 36 Institutional Rights, Inc., 547 U.S. 47 (2006), addressing (and affirming the prohibition of) law
 37 school conduct banning military recruiters. Some conduct is so inherently expressive that it
 38
 39

40 ² Entire areas of the law—copyright, trademark, commercial disparagement, etc.—are premised upon the tortious
 41 consequences of "speech."
 42
 43

1 must, in fact, qualify as speech. See, e.g., Texas v. Johnson, 491 U.S. 397 (1989) (flag burning);
 2 and Tinker v. Des Moines Independent Community School District, 390 U.S. 503 (1969) (black
 3 armbands worn by students). We trust that PC Tools does not contend this issue is present in this
 4 case. Absent such an announcement, we will ignore any further discussion of the First
 5 Amendment.

6

7

8

9

10

11 **B. Zango's Tortious Interference Claim Has a Strong Likelihood of Success on the**
12 Merits.

13

14 Zango need only show "a fair chance of success on the merits" given that the balance of
 15 hardships tips decidedly in its favor. While Zango's harm is well-established, issuing the TRO
 16 would cause no burden upon PC Tools. Second Berretta decl. ¶6. However, even if Zango must
 17 show a strong likelihood of success, Zango's tortious interference claim readily meets that
 18 standard.

19

20

21

22

23

24 Before addressing the specific flaws in PC Tools' position, an initial point needs to be
 25 made about defendant's business. Without spyware and malware, or widespread consumer
 26 concern about them, PC Tools would cease to exist. The existence *and* promulgation of real or
 27 perceived threats to computer security is good for the defendant's business. The more alleged
 28 threats identified by antispyware products, the greater perceived value they have. Thus, PC
 29 Tools has a direct economic interest in maintaining Zango and as many "infections" as possible
 30 in its database. PC Tools' goal is to make money, not make the world safe for computer users.

31

32

33

34

35

36

37

38 PC Tools does not contest that Zango can establish the first two elements of the claim:
 39 existence of contractual relationships, and defendant's knowledge of same. PC Tools challenges
 40 only the proof of their intent and the wrongfulness of the same. PC Tools is wrong on both
 41 counts.

1 **1. Intent.**
2

3 PC Tools claims it is not taking aim at Zango, and it is “merely incidental that PC Tools’
4 classification decisions impact Zango.” Opp. at 16. Even if this were true initially, it is not true
5 now. As PC Tools notes, the harm experienced by Zango results from a classification *decision*.
6 This is not happenstance, and it is especially not so given that for the better part of several
7 months Zango has implored PC Tools to delete Zango from its database of suspect software.
8 Dkt. # 7 at ¶¶ 14-16. Since defendant’s refusal to accede to Zango’s request is clearly a
9 conscious, considered decision, it cannot be described as anything but intentional.
10

11 **2. Improper Motive/Means**
12

13 PC Tools makes two arguments why their actions are proper, and in the context of the
14 industry in which it operates, they are so lacking in merit as to be frivolous.
15

16 First, PC Tools justifies the inclusion of Zango in its database of infections on the
17 grounds of Zango’s “long history of abuse.” The “history” to which defendant refers is history
18 that is more than 18 months old—a near eternity in the software industry. Lest that be deemed
19 overstatement, consider that You Tube was founded in February 2005 and 20 months later was
20 such a social and economic phenomena that Google purchased it for \$1.65 billion. Zango’s
21 software is *not* the software that led to the FTC order—and PC Tools well knows it. PC Tools
22 intentionally informs customers that they should be concerned about Zango, a false and damning
23 characterization not shared by Mr. Meem, its own MRC director.
24

25 Second, PC Tools offers the “lemming defense”—everyone else is doing it, so I must be
26 okay. See Opp. at 16 (“PC Tools is not the only anti-malware software provider that has
27 classified Zango as potentially harmful”). The conduct of others is irrelevant for an obvious
28 reason—they too may be (and in this case are) in the wrong, which is quite likely given they have
29

1 the same profit incentives and business models as PC Tools. Moreover, other anti-malware
 2 providers do not cast aspersions on Zango. Dkt. 7 at ¶ 5. Thus, the differing treatment of Zango
 3 by various providers of anti-malware is not probative of propriety.
 4

5 Zango has established a substantial likelihood of proving wrongfulness. PC Tools knows
 6 Zango is not malicious, but it is unwilling to take all steps logically consonant with that finding.
 7 The apparent reason is that it is in their financial interest to continue the harm they are causing.
 8

9 **C. The Court Has General Personal Jurisdiction Over PC Tools Because PC Tools'
 10 Own Evidence Establishes That Washington Residents Previously Have
 11 Downloaded PC Tools' "Spyware Doctor" 70,000 Times and Continue to Download
 12 the Software 700 Times Each Week.**

13 "The Court may exercise general personal jurisdiction over a defendant when it has
 14 engaged in substantial or continuous and systematic business activities in the forum state."
 15 Expedia, Inc. v. Reservationsystem.com, Inc., No. C06-1580RSM, 2006 U.S. Dist. LEXIS
 16 90848, at *7 (W.D. Wash. Dec. 14, 2006) (citing Bancroft & Masters, Inc. v. Augusta Nat'l Inc.,
 17 223 F.3d 1082, 1086 (9th Cir. 2000)). In *Expedia*, this Court noted that general jurisdiction
 18 focuses on the defendant's forum-related activity—regardless of whether that amount comprises
 19 only a small portion of the defendant's total business activity around the world:
 20

21 While only a small portion of Bookit's revenue and reservations may actually
 22 come from Washington, that doesn't change the fact that Bookit's sales through
 23 its website are intentional and entirely within Bookit's control, and sales do
 24 actually occur in this state.

25 Id. at *8 (further noting that Washington resident bookings from online travel site was "less than
 26 one percent" of total bookings and that bookings at Washington hotels, flights reserved by
 27 people in Washington, and Washington car rental bookings were each "less than one-tenth of one
 28 percent" of defendant's total bookings respectively).
 29
 30
 31

1 Here, PC Tools' "substantial or continuous and systematic" activities in Washington are
 2 plainly evident by the numbers—*numbers supplied by PC Tools*. "Spyware Doctor has been
 3 downloaded over 100 million times, and it continues to be downloaded *approximately a million*
 4 *times every week.*" Dkt. #19 at 4 (emphasis added). Since PC Tools represents that 0.07 percent
 5 of all Spyware Doctor downloads during a recent month are from Washington residents, *see* Dkt.
 6 #18 ¶ 6, Washington residents download Spyware Doctor, for pay or for free, at a rate of
 7 approximately 700 times per week. Applying that percentage of Washington-based downloads
 8 to all 100 million downloads of Spyware Doctor, *Washington residents have acquired*
 9 *approximately 70,000 copies of defendant's software*. Just as this Court exercised general
 10 jurisdiction over the non-resident internet defendant in *Expedia*, the Court should do so here.
 11

21 **D. Zango's Response to the Request for an "Enormous" Bond.**

22 We have no quarrel with the law regarding the size of the bond and leave this issue to the
 23 Court's discretion. We disagree, however, in the entirety with every reason articulated by PC
 24 Tools for a sizeable bond. PC Tools' assertions and our responses, are as follows:
 25

<u>PC Tools' Position</u>	<u>Our Response</u>
31 PC Tools no longer would be able 32 to provide the service upon which 33 its customers rely.	PC Tools <u>has already agreed</u> that 34 Zango should not be classified as 35 malware. Zango is just trying to 36 compel them to eliminate the 37 remaining vestiges of this error. It is 38 impossible that their customers 39 might rely on this "service."
40 Zango could modify its software 41 after such an order, and PC Tools 42 could do nothing about it.	Zango is already being monitored by 43 the FTC for compliance with the 44 Order and the prohibition therein. In 45 any event, PC Tools could come 46 back to court if it wished.
47 Other third-party software	If other third-party software

PC Tools' Position

1 providers would be emboldened to
 2 file suit to challenge PC Tools'
 3 classifications of their software.
 4
 5

6 Consumers likely would switch to
 7 one of many competitors in PC
 8 Tools' industry that are not
 9 shackled by an injunction.
 10
 11

Our Response

1 providers are similarly situated
 2 (although we are aware of none)
 3 they certainly should challenge the
 4 classification of their software.
 5
 6

7 Consumers likely would switch to
 8 one of many competitors in PC
 9 Tools' industry that are not
 10 shackled by an injunction.
 11 We cannot see how this would
 12 happen. It is more likely a consumer
 13 would switch because its PC Tools
 14 software erased a Zango program
 15 that PC Tools itself had admitted
 16 was perfectly acceptable.
 17
 18

E. **Motion to Strike.**

1 Finally, pursuant to LR 8(g), Zango moves to strike in its entirety Exhibit 3 to the
 2 Declaration of Tarek F. Saad, a compilation of news articles retrieved from the internet. In our
 3 view, portions of the articles are true and portions are false. We lack the time in the 21 hours
 4 permitted for this response to separate the wheat from the chaff, they are unnecessary to PC
 5 Tools' position, in any event, and they are classic hearsay, much of it second-level hearsay, out-
 6 of-court statements within out-of-court statements.
 7
